

Modification to Schedule in Signals Operating Instructions V4.2 (White paper)

Statement of Purpose:

To correct a scheduling conflict on Page 12 of the current version of AmRRON's Signals Operating Instructions, Version 4.2 and 4.2(C).

Intent:

Move the 20m National nets (voice and digital) back two hours (Standard Time), or three hours (Daylight Savings Time), avoiding an overlap between the National net and afternoon Regional nets. Also, there is a misprint in the side band of the voice frequency -- both voice and digital should be in USB (Upper Sideband). The next version of the SOI (V5.0) will reflect this change.

General Guidance:

Print this guidance and insert into your SOI on Page 12, or hand-write the following changes:

NATIONAL NETS			
During Daylight Savings Time (summer)		1700 Zulu	17:30 - 18:30 Zulu
During Standard Time (winter)		1800 Zulu	18:30 - 1930 Zulu
My Local Time-->			
20m	14.338 USB	Voice	
20m	14.110 USB		Digital mode
